What is the use of Aspose .NET Products?

Aspose are file format experts and provide APIs and components for various file formats including MS Office, OpenOffice, PDF and Image formats. These APIs are available on a number of development platforms including .NET frameworks – the .NET frameworks starting from version 2.0 are supported. If you are a .NET developer, you can use Aspose's native .NET APIs in your .NET applications to process various file formats in just a few lines of codes. All the Aspose APIs don't have any dependency over any other engine. For example, you don't need to have MS Office installed on the server to process MS Office files.
